

METHOD OF MODIFYING THE RELEASE PROFILE OF
SUSTAINED RELEASE COMPOSITIONS

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method for the sustained release *in vivo* of a
5 biologically active agent comprising administering to a subject in need of treatment an
effective amount of a sustained release composition comprising a biocompatible
polymer having the biologically active agent incorporated therein, and a bisphosphonate
wherein the bisphosphonate compound is present in an amount sufficient to modify the
release profile of the biologically active agent from the sustained release composition.
10 Pharmaceutical compositions suitable for use in the method of the invention are also
disclosed.
